Semifinal Timeline

Semifinal Round Starts

July 30, 2026

Deliverables Deadline

August 10, 2026

Finalist Announcement

August 14, 2026

AI Product Proposal/Paper

- The document represents the final version of the concept paper submitted in the preliminary round.
- Still uses the NeurIPS 2015 format and the same structure, with the addition of a Results and Discussion section.
- Teams are permitted to make changes to their original concept paper, however The problem and the proposed product must remain consistent with your preliminary concept paper.
- Maximum 12 pages, submitted as a PDF

Implementation

- Teams develop their product concept into a working product.
- Submit your GitHub repository link, containing the full codebase and a README with setup instructions and how to run the product.
- If your product uses trained model weights or datasets, these must be hosted on Hugging Face and submitted as a separate link.
- Repositories may stay private during the semifinal, but must be set to public after the deadline for verification.
- If any data cannot be made public (e.g. sensitive or partner data), inform the committee so we can be invited as collaborators instead.
- Make sure the features claimed in your paper are actually present and testable.

Video Demo Product

- The video must explain the business side of your product and then show the working product in action.
- The video duration must be between 3 and 5 minutes.
- We recommend allocating at least 1 minute for the business explanation and at least 2 minutes for the product demonstration.
- Focus on demonstrating the product working, not on slide presentations or mockups.
- Submitted as a link (unlisted YouTube / Google Drive) accessible to the committee.

Assessment Rubric

	Criterion	Weight
Impact (45%)	Value Creation & Demonstrated Impact	20%
	Adoption, Feasibility & Scalability	10%
	Innovation & Meaningful Differentiation	15%
Implementation (45%)	Functional Product & User Experience	10%
	AI Implementation & Technical Excellence	20%
	Evaluation, Reliability & Responsible AI	10%
	System Design, Engineering & Reproducibility	5%
Demo (10%)	Product Demonstration & Presentability	10%
	Total	100%

Detailed Scoring Rubric

Value Creation & Demonstrated Impact (20%)

- **Problem Significance & User Relevance:** Addresses a meaningful problem with clearly identified users, stakeholders, pain points, and real-world constraints.
- **Value Creation:** Demonstrates how the product improves existing conditions through better efficiency, accessibility, safety, accuracy, reliability, decision-making, or other relevant outcomes.
- **Impact Evidence:** Supports impact claims with relevant evidence such as user feedback, expert validation, usability testing, pilot results, quantitative comparisons, or credible research.

Detailed Scoring Rubric

Adoption, Feasibility & Scalability (10%)

- **Adoption Pathway:** Identifies who will use, adopt, operate, or maintain the product and how it fits into existing workflows.
- **Implementation Feasibility:** Considers operational requirements, costs, infrastructure, data availability, external dependencies, and relevant legal or privacy constraints.
- **Scalability Potential:** Presents a credible strategy for expanding the product across more users, organizations, regions, or use cases.

Detailed Scoring Rubric

Innovation & Meaningful Differentiation (15%)

- **Originality:** Presents a distinctive product concept, AI application, user experience, or technical approach.
- **Meaningful Differentiation:** Clearly explains how the product differs from existing solutions, workflows, or alternatives.
- **Practical Innovation:** Uses innovation to create meaningful improvements in accessibility, effectiveness, efficiency, usability, or scalability rather than novelty alone.

Detailed Scoring Rubric

Functional Product & User Experience (10%)

- **End-to-End Functionality:** Demonstrates a working core user journey with implemented and testable features.
- **Product Usability:** Provides clear inputs, processes, outputs, and interactions that are understandable and usable for the intended users.
- **System Integration & Reliability:** Integrates frontend, backend, data, and AI components reliably, including appropriate handling of basic errors or failure conditions.

Detailed Scoring Rubric

AI Implementation & Technical Excellence (20%)

- **Appropriate AI Approach:** Selects AI models, methods, and architectures that are suitable for the problem and intended product.
- **Technical Depth & Justification:** Clearly explains the data pipeline, training or inference process, technical decisions, and trade-offs.
- **AI-Product Integration:** Integrates AI meaningfully into the product's core workflow and value creation.
- **Robustness & Efficiency:** Considers model robustness, latency, computational requirements, operating cost, and relevant edge cases.

Detailed Scoring Rubric

Evaluation, Reliability & Responsible AI (10%)

- **Experimental Evaluation:** Uses appropriate metrics, baselines, validation methods, and quantitative or qualitative testing.
- **Reliability & Error Analysis:** Examines failure cases, edge cases, limitations, and consistency between experimental results and product claims.
- **Responsible AI Considerations:** Identifies relevant risks related to privacy, bias, hallucination, security, safety, or misuse and proposes reasonable mitigation strategies.

Detailed Scoring Rubric

System Design, Engineering & Reproducibility (5%)

- **System Architecture & Code Quality:** Provides a clear system design, organized repository, maintainable codebase, and appropriate integration between components.
- **Documentation & Setup:** Includes a complete README, dependency requirements, setup instructions, and clear guidance on how to run the product.
- **Reproducibility & Access:** Provides access to required datasets, model weights, and other artifacts needed to verify the implementation.

Detailed Scoring Rubric

Product Demonstration & Presentability (10%)

- **Business and Product Clarity:** Clearly communicates the problem, intended users, product value, and why the solution matters.
- **Working Product Demonstration:** Shows the actual product in action, including the core user journey, implemented features, and visible AI capabilities.
- **Demo Credibility & Completeness:** Demonstrates realistic inputs and outputs through a coherent and convincing end-to-end flow.
- **Public-Facing Presentability:** Presents the product in a way that is understandable and engaging for judges, stakeholders, and the public.
